

Project Tracking

This flexible, highly customisable tool allows Construction Project Managers, the Design Team and others to successfully collaborate and exchange accurate information in real-time.

Accurate tracking and reporting on the dates facts and figures that are associated with any project roll-out can be problematic, especially where the knowledge is held by many disparate parties.

With ICON's Properties and Projects solution, individuals directly update the information they are responsible for. Project managers can then report and analyse that information, across sets of projects, whenever needed.

Clients, Architects, Contractors and other consultants have many issues which need to be addressed efficiently to ensure the successful delivery and completion of a construction project.

Two key areas are sound management procedures and the communication and tracking of information that is gathered throughout the project.

Others issues include:

- Tight project timescales
- Maintaining quality
- Managing budgets and resources
- Managing safety requirements
- Secure access to information
- Tracking who created, viewed and changed what and when

Establishing excellent and proven business practice is essential to a successful project, but equally important is a sound implementation strategy and the proper tools to make it happen.

The ICON Solution

The ICON Properties and Projects solution has been designed to address these issues. This flexible, highly customisable tool allows Construction Project Managers, the design team and others to successfully exchange accurate information in real-time on many aspects of a construction project. The solution can be used to manage all information pertaining to any number of properties (e.g. 'as built' information), as well as tracking all activities (e.g. projects) which occur on those properties.

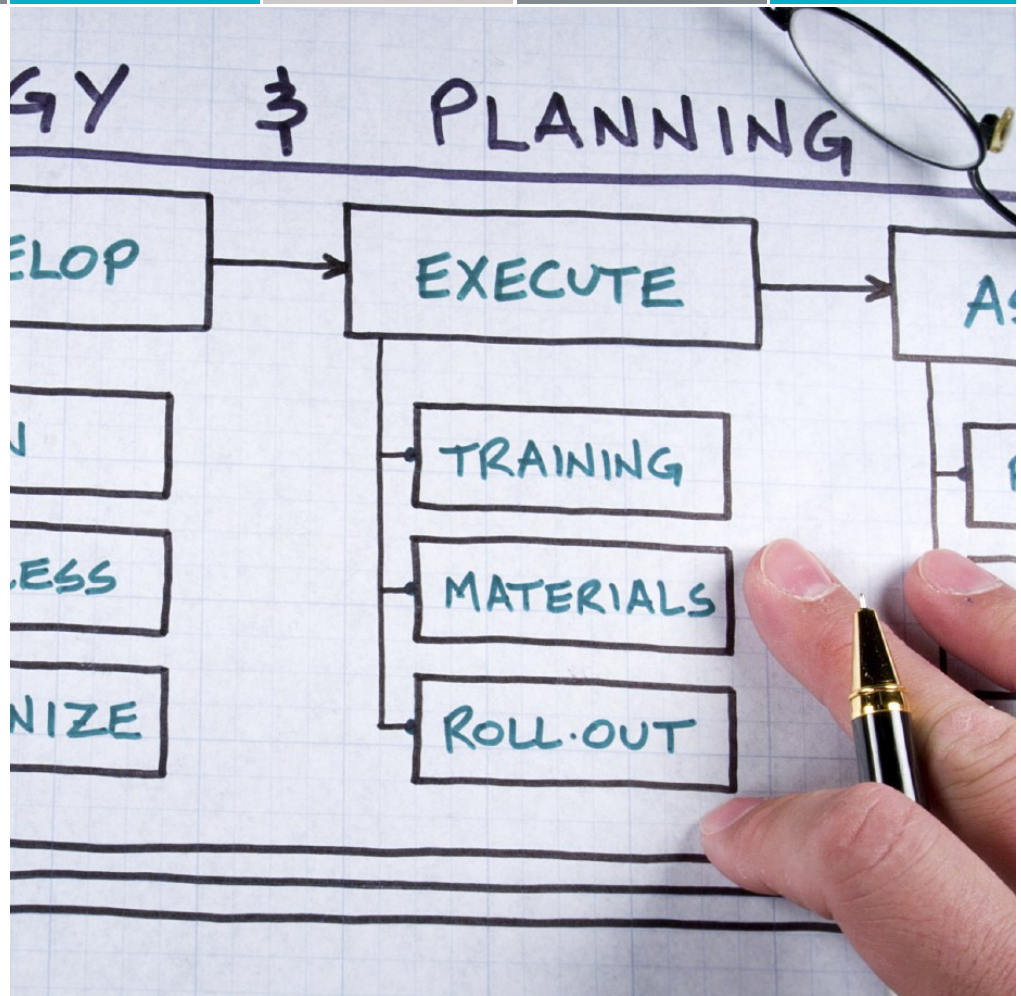

Unlike most other property management systems, as well as storing documents, The ICON System also stores 'dynamic' data, i.e. dates, facts, figures, logic, contacts, etc. This means that customised reports can be generated across a series of projects, allowing 'comparisons between' and 'summaries of' multiple projects and pre-defined events.

“The ICON System keeps me updated by email with any changes updated onto the site and the search option is very good. It gives me online access to the latest Specifications, which is beneficial for my type of work.”

Cornelius Clancy, Bamber and Reddan Architects Ltd

ICON's Project Tracking solution is one of a number of products to help those involved in Business Process Management, Specification Management, Property and Project Management.

For more information on the ICON System and its unique complementary support service, please telephone 01858 468345 or visit www.iconsystem.co.uk

Key Features:

- Contributors manage relevant data directly
- Updates are made in real-time for instant feedback
- Fully customisable - you decide what you want track and to report on
- Data stored in the correct format, e.g. a date as a date, not text
- Instant reports on live data
- Plan the stages of a project and pre-define events
- Repository for all historical, current and upcoming projects, surveys and maintenance

“Generally responses happen very quickly, because the system has been created with a good structure that easily allows for requests and modifications.”

Bernard Novell, Waitrose
